

Hands On, Realistic Scenario Driven Training

BitSec Global Forensics is a worldwide leader in information security and computer forensics training. The United States Government, as well as major Fortune 500 Corporations, entrust in BitSec to provide discreet and confidential on-site and up to date information security and computer forensic training. Global in reach, BitSec has delivered training in over 30 countries across 5 continents.

BitSec instructors work very closely with our clients to deliver hands on, scenario driven training exercises utilizing best-of-breed current technology and practices. Many scenarios are built exclusively for the client, focusing on their unique needs and interests. Topics have included, but are not limited to; Advanced Persistent Threats (APT), Malware Analysis, Network Intrusion Investigation, Collection and Analysis of Physical Memory (RAM), Encryption and Steganography, Computer Forensic Unit Mentoring and Capacity Building.

BitSec recognizes that while travel budgets may be restrictive, training needs and mandates still exist. As an alternative, consider an on-site BitSec training program at your location, at a time convenient to you, saving you thousands in travel expenses.

For groups seeking to achieve recognition as Guidance Software EnCase Certified Examiners (EnCE), BitSec offers an exclusive Mentor Protégée Program that combines several official EnCase training courses and one on one mentoring.

For those who require CPE credits, BitSec Global Forensics has been approved as a registered sponsor on the National Registry of CPE Sponsors confirming our commitment to adhere to standards for the delivery of high quality continuing professional education. As such, selected courses are eligible for CPE credits.

“The team at BitSec was very responsive to our requests and quickly developed a course specific to our unique needs and interests. What’s more, they delivered it at a time convenient to us and at our location, saving us thousands in travel related expenses and ultimately allowing us to train more people. The course was such a success that we’ve asked them to return with a second course, later this year”

R. Rampolla - Manager Information Security, Tampa Electric Company

“BitSec Forensics was a natural selection as a Guidance Software training partner. Their years of experience in the forensic training and digital investigations arenas offer students a training experience built upon practical application.”

M. Fowler - Senior Director, Guidance Software, Inc.
