

Forensic Precision & Legal Accuracy

BitSec Global Forensics™ offers scalable and cost-effective electronic discovery services that encompass the entire Electronic Discovery Reference Model (EDRM). BitSec utilizes a risk-based approach to e-discovery that aims to ensure that the entire process has precision, accuracy, integrity, and is defensible. All delivered by highly credentialed cyber security experts and leaders in the field of digital forensics with backgrounds in the United States Government, local and state law enforcement and academia.

As your case develops, BitSec is able to:

- Interpret the technical aspects of the case and identify reasonable and cost effective strategies and solutions that are consistent with best practices.
- Serve as your designated ESI expert at *Meet and Confers* (FRCP 26f) or other legal proceedings in federal or state court.
- Meet with your stakeholders and perform early case assessment (ECA) to help you understand the universe of potentially responsive electronically stored information (ESI).
- Help clients avoid the pitfalls and common legal sanctions often associated with inadequate preservation, search, review and production of ESI.
- Avoid keyword guesswork by rapidly assessing ESI from key custodians and choosing keywords based on fact.
- Provide a best in class legal hosted legal review platform
- Produce responsive ESI in all major legal review formats. Bates numbering or annotations are available as well as manual or bulk redactions.

"I have never worked with a team that deals so well with the personal and technical aspects of complex, high-tech, high-risk investigations. I can well-understand why BitSec has a superb national and international reputation for its work."

*K. Smith - Shareholder
Drummond Woodsum*

"Right from the start, Mike Webber (BitSec) was a pleasure to work with. He met with us at our office and quickly helped us outline a plan for mirroring and, eventually, examining the former employee's hard drive. All the while, Mr. Webber maintained a steady stream of courteous and professional communications updating us on his progress. Needless to say, we were very pleased with BitSec's service and would certainly use them again."

*T. Meek - Attorney
Pierce Atwood*

BitSec Global Forensics Electronic Discovery Services Include:

- A defensible e-discovery plan
- Expert testimony
- Early case assessment and keyword testing, including keyword frequency, duplicates, timeline, word count, extensions, and custodians
- Cloud based collection from web-based email providers like Gmail™, Hotmail™, and Yahoo™
- Social media collections from Twitter™, Facebook™, and LinkedIn™
- Forensic imaging or network based collections of servers, desktop and laptop computers, cellular phones, GPS units, and tablets
- Exports into all major legal formats and review platforms including Concordance, Summation, and Relativity.
- A wide-variety of production options including native, searchable PDF, PST, MSG, and others.
- Bates numbering and annotation
- Protected chain of custody reports
- Hosted legal review using Relativity™

"Whether in the context of government investigations or civil litigation, issues involving electronic data are a minefield that is very difficult to navigate... it is really critical to have the expertise of a company like BitSec to ensure that your client meets its responsibilities and doesn't end up creating additional issues or problems by failing to meet those responsibilities."
